

PROJECT EXPERIENCE

NORTH WESTERN REGIONAL FISHERIES BOARD RIVER MOY WEIR, BALLINA—INSPECTION

CEI Collins Engineers Ltd. was commissioned to undertake an above and underwater inspection of approximately 70 m of masonry weir by Doherty Coleman Architects, on behalf of the North Western Regional Fisheries Board.

Collins carried out a detailed visual and tactile inspection of the weir in fast river currents, using a 4 person team of engineer-divers, along with channel bed soundings.

A Chartered Engineer's Report was generated which consisted of a description of all defects, accompanying photographs and condition ratings for each element of the weir.
